# Advantages of Sagres Site - ICOL

## Important site to get Correct

### Always Case 1

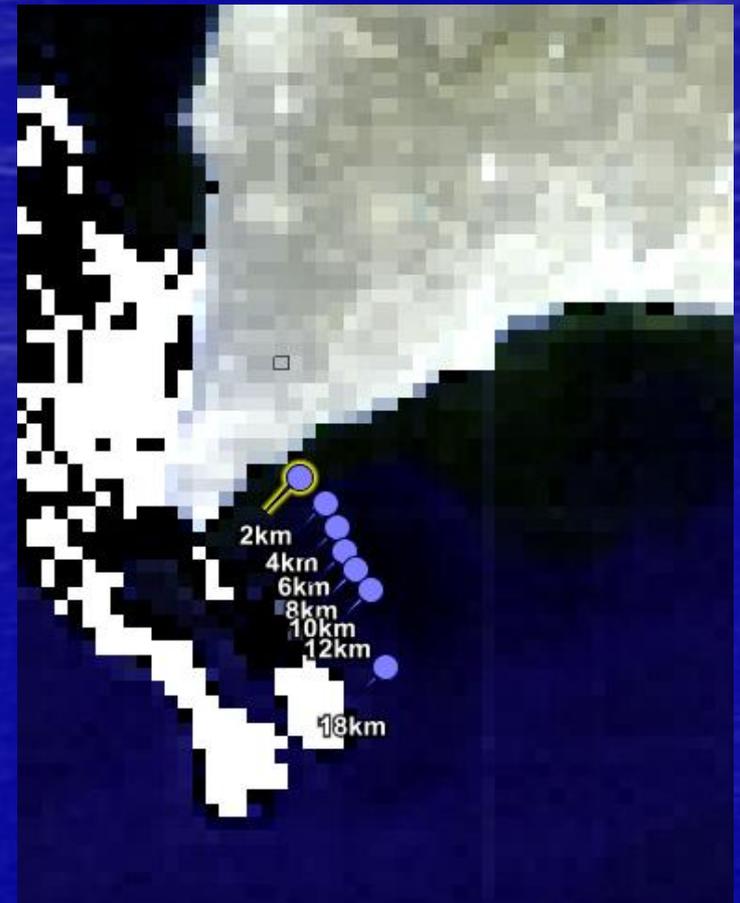

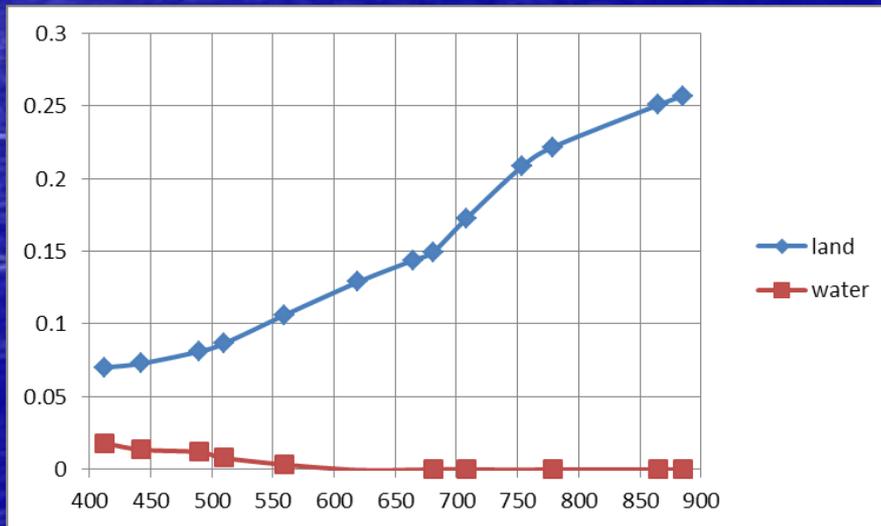

Contrasting Conditions:

Upwelling – Chl 1.0 >> 5.0

Otherwise – Chl <1.0

Nearby CIMEL

Fairly consistent vegetation

## **Performance Assessment**

### **Two trials – low chlorophyll – non upwelling**

#### **1) 11-Nov-2008**

- **3 Stations at 2km, 10km and 18km from shore - nominal.**
- **FR Imagery – (Beam 4.8)**
- **CDOM, Chl, YSBPA, PABS**
- **No Aerosol Measurement**
- **TACCS Manufacturers Cal – Single wavelength K-Chain**

#### **2) 14-Oct-2011 – experiment - preliminary assessment**

- **6 Stations 2km, 4km,6km,8km,10km,12km, 18km from shore.**
- **RR Imagery – (Beam 4.9) Many thanks to Jan Jackson at ARGANS**
- **No CDOM etc.**
- **Aerosol from CIMEL, Microtops**
- **TACCS ARC2010 Cal – Four wavelength K-Chain**

**Identical processing 3<sup>rd</sup> reprocessing Cal.**

ICOL

## Conclusions

**We can get the data for validation but.**

**V2.5 – Seems to over correct – does not run full orbit**

**V2.7.4 – Seems to under-correct – runs full orbit.**

**Comments ....**
